

# PALMSCAN VF2000 PICO NEO VISUAL FIELD ANALYZER

## USER-FRIENDLY

Visual benchmarks can be gathered with minimal guidance from you or your technicians.

## CODING STANDARDS

Although innovative, this device still meets the standards for the codes needed for correct billing.

## ROBUST PRACTICE SUPPORT

MMD Reps offer comprehensive technical support and resources to every practice.

## SANITARY AND SAFE

Easy to clean between exams, and comes with patient-friendly disposable face shields.

## UNIVERSAL EFFICIENCY

The Pico Neo can be used anywhere in your practice or off-site and in the field.

The Pico Neo is a first-of-its-kind, portable tool, able to perform the comprehensive visual field analysis of the VF2000, five core vision tests, and has the added ability of **Active Gaze Tracking**:

- Ensures accurate testing and lower margins of error by pausing tests during periods of unaligned sight.
- Uses blinks to measure response to stimuli so patients with disabilities or paralysis are able to take these tests.
- Active gaze tracking allows patients to take breaks. If you shut your eyes, the test will pause.

## FIVE CORE TESTS:

- Visual Acuity Test
- Contrast Sensitivity Test
- Color Test
- Stereopsis Test
- FDT (Frequency Doubling Technology)

## INCREASED ACCESSIBILITY FOR ALL PATIENTS

- No pressure on patient's head and neck
- The weight of the goggle is supported by the headrest
- More comfortable and relaxed experience - even for elderly and differently abled patients

## OUR 100% COMMITMENT TO YOUR SUCCESS

Warranty

"The days of intimidating, cumbersome, automated perimetry equipment may be numbered! All our field plots compare astoundingly well with those from a standard Humphrey's VFA. Above all, patients love this!"

**DR. ZIA CARRIM, MD**
